PROFILE

Responsive. Mobile. Creative. Branding. We can't ignore that our culture as a whole now realizes the value of a seamless interactive experience across devices. Airbnb, Uber and DoorDash reflect this in our daily lives. If IBM's CEO Thomas Watson Jr. taught us anything, it's that good design is good business.

I am a Senior UI + UX + Designer. I do mockups, wireframes, apps and websites. I sketch, strategize, mold graphics, choose typefaces, style transitions, and get design feedback. I iterate based on that feedback and beautify the front-end of the web with custom UI components. I'm a user-experience advocate, a product owner, and a teacher. For the past 15 years I have been a leader in for-profit and nonprofit digital projects.

I highly value the relationship between programmers and designers. Steve Jobs had to have Steve Wozniak. It's critical to correctly fuse engineering with aesthetics; anyone who really wants things to work in their digital projects will value and nourish that relationship. Yes, there is no "i" in web team.

RECENT WORK

Sr. Product Designer, Ncontracts, Brentwood, TN: 2021-Present

With thousands of clients across the country, Ncontracts builds software for financial institutions; helping them transform risk management and compliance from complex burdens into strategic advantages. As a Senior designer working on Ncontracts solutions and services, I'm responsible for creating and enriching products, refining [our design system](#), collaborating with developers and product leaders, and mentoring designers. My daily routine is agile, usability and customer focused; and relies on design thinking to solve problems.

Sr. UX Designer/Developer, Global Impact, Alexandria, VA: 2014-2021

Global Impact builds partnerships and raises resources that help the world's most vulnerable people, including campaign design and software solutions for fundraising campaigns. I was a

Senior leader on the front-end of the software team at Global Impact; designing responsive mockups, interfaces, and user stories for these campaigns; using InVision, Bootstrap, HTML, SCSS, JS, Font Awesome, Rails, Git, and Heroku to create custom web apps and sites.

Takeaway: I created over 300 customized digital fundraising campaigns in seven years, resulting in over \$15 million dollars in donations for notable charities at work around the world.

Interactive Producer, GS&F, Nashville, TN: 2013-2014

GS&F (Gish, Sherwood and Friends) is a fully-integrated marketing agency in Nashville with clients like Firestone, the Tennessee Titans, A.O. Smith, and the University of Tennessee Medical Center. My job was to help craft and bring the digital side of the agency to life, through building and maintaining our client brands' user interfaces online. I built responsive sites and emails whenever possible to deliver the most engaging experience to users across different devices.

Web Designer, The Gideons International, Nashville, TN: 2008-2013

With a presence in 194 countries around the world, The Gideons International has to have a consistent look and feel to their websites. I was the lead Web Designer working with the organization's intranet, the member website and the public facing websites: tweaking and building pages, uploading images, audio & video, and building and sending HTML emails. I worked with analytics and social media too, measuring how well our interactive content was being received.

Takeaway: I worked with a software vendor in Ireland to get our organization's print magazine online. I saved the department that was shipping those copies of the magazine overseas \$180,000/yr in shipping costs.

EDUCATION

ECPI College of Technology, Virginia Beach, VA: A.S. Degree in IT/Web Design

Old Dominion University, Norfolk, VA: B.S. Degree in Interdisciplinary Studies
